

## **My favourite invention and its impact to the world**

When we say «21st century» what pops up first in your mind? I picture a big planet with bunch of computers on it. There are lots of gadgets in the world. According to Wikipedia a gadget is a small tool such as a machine that has a particular function, but is often thought of as a novelty. It definitely makes our life much easier compare to times when people didn't have such an amazing technologies. My favorite gadget ever probably is my smartphone. Laptops, tablets, phones etc take an important place in our daily routine. It has a huge impact on our life. For example without those gadgets almost no profession can do their job properly. We can use them for work and just in leisure time. In recent years, these devices have become increasingly general-purpose as they combine several functions, including making calls, streaming video and playing games. Just think of the morning when you start using the gadgets. From the very first in the morning, you need to use the alarm clock to wake you up until you want to get late.

In present era of modern technologies it is hard to imagine a kid without those cool compact and pretty things in their hands. In my opinion there are plethora of advantages of new era technologies such as a smartphone.

First of all it is a better quality for communication with others. Having a good phone makes your daily life more productive and interesting. There are so many ways staying in touch with your teacher or classmates nowadays. One of the easiest ways is having a class group chat where you can share news, discuss whatever you got on your mind and talk about projects or being able to visit your teacher's site with lessons and homework in it. Therefore you can submit all of your assignments just there, instead of wasting papers, because it is harmful for environment. We all should start caring about ecology and save trees. All of that is possible with newest gadgets.

Speaking of communication. It is no longer painful staying away from your family and friends. I had an experience being away from my home country for the long term and it was hard, because I couldn't see my parents in person at all, even on holidays, but whenever I would have a homesick I could just FaceTime them and be happy! With these technologies no distance is a problem. I still could participate at my best friend's birthday party and have fun even though I was thousand miles away. With no doubt I can say that gadgets bring joy to family and friends!

Buying a new smartphones is a good investment in your pictures quality. A plenty of people really pay attention to a camera on the phones and want it to be as close as to a professional camera like «Canon» or «Nikon». I am one of those people who prefer buying a phone with a nice quality camera for mesmerizing pictures. Taking pictures is one of my hobbies and that's why I would rather to buy an expensive phone with everything in it than buying a cheap phone with no good camera and after a while deciding to buy a pro camera. In my opinion it's too much expenses for a teenager like me. That's the reason why a bunch of companies

produce phones that called «cameraphones» with the main accent on the camera. For example «Apple» company makes new iPhones every year and make people update their old smartphones for a better iPhone with a better camera. It is really cool when you have so many good stuff just in one tiny phone. Isn't it wonderful? So many possibilities with having gadgets in our world. There a plethora of useful apps that can be uploaded on our phones and help us to study and learn something new. For example I have a bunch of encyclopedias, math and physics formulas, political and physical maps of the world. People who are learning to play on whatever instruments can download some apps that help to tune their musical instruments, practice their ear for music and even create their own music. Good apps certainly make learning process much more easier and interesting.

As was said it makes study process easier that's why I want to mention apps for learning foreign languages. As for me it was very helpful. When I would have a free minute on my way to school or somewhere else I would open my app for learning English and listen to different audiobooks or watch any show with subtitles. I think, devoting time for such a things like that will make your learning more effective and faster.

Teaching kindergartens will be even better with apps for pre-school age children. All you need is to find a right app which helps your kid to memorize the pictures and then match them right with the descriptions or solve problems, analyze and explore.

Carrying a lot of books to school might be really heavy for a little child. Instead of harming their backbones' health we all should start using tablets or smartphones. It can replace even a big room sized libraries for us. There are a lot of pros for that. With the help of that kind of gadgets we will never be worried about forgetting any school books at home, because everything is in your smartphone or tablet.

It is almost impossible to get an education without having any gadget. Everything is based on modern technologies. Even in universities when you have to write down lecture based notes, do presentations, write essays, course work or even diploma work you definitely will need a gadget to be able to do all of that. So, I would say you will be needed in gadgets to graduate.

Having a modern gadget will give you an opportunity to create and search whatever information you need. As we know who has information has everything. Finding information for a science work, report or preparing for exams is easier when you have an Internet in your gadget. Owner of gadget will always have an access to a world wide web, which means we will always be able to find a particular information about anything wherever we are sitting at. Pretty much full territory of Kazakhstan has a good internet access. All smartphones have a wifi and 3G modes on.

Having internet in my life helped me a lot. Whenever I have a troubles with math, physics or chemistry I can use Internet on my phone and open an app or site with an explanation of chapter I didn't understand at school. I use this trick since my 5th grade. Actually it is helpful even with school literature. Last year when I had a language barrier, and reading books in English was a challenging thing for me, I

tried to find a book explanation or description in internet and to be honest I don't know what I would do without my phone and internet. 100 years ago people would never think of sitting at home and having an access to a huge amount of useful information. They would never dream of world news on a tiny piece of metal, they would never dream of content of books in a tiny piece of metal, they would never dream of being able to get an education via a tiny piece of metal. We all should be grateful for having such an amazing technologies, because it makes our life so much easier and simpler.

Developing fine motor skills is a key to future ambitions of a child. Working with joystick, different buttons and touchscreen and watching the pointer moving helps a child to develop his/her concentration skills, practice finger agility.

It also helps to stimulate imagination. There are so many information and possibilities with our phones, so we can do a lot of stuff. Starting with ideas for your business ending up with creating your own program. Stimulating imagination among people caused new job types.

People no longer have to wait for their bosses or colleagues to come to the office or meet somewhere up to sign documents when they can be signed electronically with the help of new era gadgets.

Building and developing searching and filtering skills are real for school students. Mostly those skills form during teenage years. Having lots of resources make student find right and reliable information. Besides it helps people to develop critical thinking which considers as good nowadays.

When I was younger I used to download tons of games on my phone and play them whenever I get bored. I would say that it can replace a big TVs with play station boxes. So, parents can save money on buying play stations and save the place in the living room. It is possible to play online with your friends and still have fun together by connecting to each other on the server.

I often use my phone as a tool for listening to music. It is important for me to keep up with other teenagers in that kind of things. I know that all of my friends listen to music everyday to brighten up their drab lives. There are plenty of platforms where we can download music for free or for money and still enjoy the songs of millions of artists. What can be better than having MP3 player in your phone and not worrying about carrying your memory stick or flash drives to be able to listen to music?

In America almost everyone use their phones to pay bills or just shop. My host parents in the USA would always have their electronic credit or debit cards on their smartphones and whenever they forget their actual wallets they just use online payment method.

Online shopping become really popular and epidemical thing in 21st century. It is good for people who are very busy and can't afford to lose any minute wondering in shopping centers. This is why online shopping become a good solution for those people and not only for them. I like to surf different shopping sites and put clothes I liked in the cart , so I could order them later after I show it my mom and she will approve it. You don't even have to pick it up from any place, because it will be brought straight to your house.

This list of pros of gadgets can be endless, because it has a huge good impact to our lives and we all have to admit that it's impossible to ignore technologies nowadays.

Even while writing that essay I am using my laptop as my paper and keyboard as my pen. Because why not? I want and I do use modern technologies in my life and enjoy my abilities with them. It is a breakthrough in people's life which brings only joy and makes life so much easier.

In my opinion it is important to make children learn how to be competent with computer work. As was said everything is based on computers and it is a key to bright future. IT sphere is popular and has a big potential to grow, that's why IT specialists are so important and valuable. Kazakhstan has a big capacity to grow in that sphere and get on world level with robots and other technologies with such a smart generation.
