## **The future is in your hands! Invent and Create!**

The future is in your hands! Invent and Create!

I realize that the future is very near, mankind has made such progress at the moment that it's hard to imagine what will happen to our world in the future. It would seem that centuries ago there were no tall skyscrapers, no internet, people did everything by hand, at that time there were no automatic machines, ordinary people had to do everything. Now everything is done by automated machines, set up for the job beforehand. And now, try to imagine what will happen with world progress in the future? Just think what our little human brain can do.

Given the opportunity, I'm sure many people would have created new gadgets, unimaginable innovations, incredible devices for life. But personally, I would help first of all from the side of medicine. At the moment, medicine still cannot cure many diseases, humanity has not yet fully mastered the skill of medicine, and we do not have the best technologies for this. To solve this problem, it is worth making some changes.

First, any schoolboy or student entering the medical profession has a huge responsibility, they must understand that this profession is one of the most important at the moment, they must undergo training much more difficult than the current one in order to have a lot of experience in work. Secondly, we need to advance our medical technologies, create devices for the convenience of patients and doctors themselves.

It is necessary to build the latest hospitals with new technologies and then medicine will improve significantly. Third, we need to advance our medical technologies, create devices for the convenience of patients and doctors themselves.

It is necessary to build the latest hospitals with new technologies and then medicine will improve significantly.

Third, Scientists and chemists must create new medicines and find a way to cure incurable diseases such as Cancer, Aids, Alzheimer's, Pregoria and the like, these diseases take hundreds of thousands of innocent people's lives and if humanity in the future finds a way to treat these diseases, it will make a huge contribution to the economy and in general everything. It will be a historical phenomenon that will be in the memory of every person.

All these three points must necessarily become a reality in the future. The best scientists from all countries unite  
to improve this world.

Summing up, I believe that everyone should contribute at least a little bit to new inventions and technologies, so in the future we will achieve great achievements

not only in medicine, but in all spheres of life of this world. It all starts with you.  
Create, Create, Don't be afraid,  
start with yourself and pull the people with you. Everything is in your hands.
